

DYNCONSTRAINTMODE system variable

1529 GstarCAD MY /KW July 14, 2021 [System Variables](#) 0 1310

Function Description:

The **DYNCONSTRAINTMODE** system variable is used to display hide dimension constraint when selected constrained objects.

Type : Integer

Saved in : Registry

Initial value : 1

Range : 0,1

System Variable Value:

0 : keep constrain hidden when selected objects

1 : display hidden constrain when constrain objects selected

Note: when hidden dynamic constraint, this system variable takes effect.
