

FONTMAP system variable

1570 GstarCAD MY /KW July 15, 2021 [System Variables](#) 0 1084

Function Description:

The **FONTMAP** system variable is used to specify the font map file for the font file to be alternated.

Type : Strings

Saved in : Registry

Initial value : gcad.fmp

In font map file, each row contains one file map. The used original font and its alternated font are separated by semicolon(;).

If the **FONTMAP** does not point to a font mapping file, or the **FMP** is not found, or the specified font name in FMP, the defined font is used in styles. If the font is not found in style, a substitute font is used according to rules.

The **FONTMAP** could only be applied on text created by **MTEXT**.
