INTELLIGENTUPDATE system variable

Function Description:

The **INTELLIGENTUPDATE** system variable is used to control the graphic refresh rate.

Type : Integer
Saved in : Registry
Initial value : 20

The default value is 20 frames per second. If confronting some problems about generating drawings or timing, users could set it to be 0 to turn it off. The **INTELLIGENTUPDATE** system variable is used to stop drawings updating until timer expired. The timer will be reset in the subsequent update.
