SAVETIME system variable

Function Description:

The **SAVETIME** system variable is used to set automatically saved time interval by minutes.

Type : Integer
Saved in : Registry
Initial value : 10
Range : 0 ~ 600

System Variable Value:

0 : close auto save
>0 : specify a none zero integer as time interval to save drawings automatically Once modified a drawing, the SAVETIME starts to time.

After manually executed **QSAVE**, **SAVE** or **SAVEAS** commands, the timer will be reset and start to time. The store path for current drawing is determined by **SAVEFILEPATH** system variable. The file name is stored by **SAVEFILE** system variable.
