

AUDIT command

1982 GstarCAD MY /KW August 3, 2021 [CAD Commands](#) 0 1302

The **AUDIT** command is used to check the integrity of graphic and modify some errors.

Command Access:

Menu : Application Menu > Drawing Utilities > Audit

Menu : File > Drawing Utilities > Audit

Command : AUDIT

Command Prompts:

Fix any errors detected? [Yes/No] :

Function Description:

For convenient visiting, the **AUDIT** command places all objects with error reports in "last" selecting set, this will have effect on editing objects in current drawing or model space.

Choose "Yes" to check the file and fix any errors that are found automatically. Choose "No" to check the file only.

If the **AUDITCTL** system variable is set to 1, the **AUDIT** command creates a text file to describe the problem and measures taken, and saves the text file to the same folder as the audited drawing with a file extension of .adt.

If there are some errors the **AUDIT** command could not fix, users could use the **RECOVER** command to retrieval drawing and modify.
