CHSPACE command

The **CHSPACE** command is used to transfer selected objects between model space and paper space.

Command Access:

Menu : Modifiy > Change Space
Command : CHSPACE

Command Prompts:

Select object:
N objects be changed from model space to paper space. Objects were scaled by a factor of n to maintain visual appearance.

Function Description:

In the new space, the moved objects could be zoomed properly. Moving the object from model space to paper space, users could click the SOURCE viewport to specify the position of moved object. Moving the object from paper space to model space, users could click the TARGET viewport to specify the position of moved object.
