

# MATCHPROP command

2216 GstarCAD MY /KW August 18, 2021 [CAD Commands](#) 0 1360

The **MATCHPROP** command is used to apply the properties of selected object to other objects.

## Command Access:

**Ribbon** : Home > Properties > Match Properties

**Menu** : Modify > Match Properties

**Command** : MATCHPROP

## Command Prompts:

Select source object: Current active settings: Color Layer Ltype Ltscale Lineweight Thickness PlotStyle Dimension Text Hatch Polyline Viewport Table Material Shadow display Multileader Select Target object or [Setup(S)]:

## Function Description:

The main properties contain color, layer, Ltype, Lscale, Lweight, print style, transparency, and others.

## Relative Glossary:

### Target object:

Specify the target object to apply the properties of the source object.

### Setup:

Users could control which property to apply on target object by the "Property Settings" dialog box. By default all properties are selected.
