QSELECT command

2307 GstarCAD MY /KW August 20, 2021 CAD Commands 0 1410

The **QSELECT** command is used to create selection sets according to filter conditions.

Command Access:

Ribbon : Home > Utilities > QSELECT
Menu : Tools > Quick Select...
Command : QSELECT
Shortcut : right-click and click "Quick Select" in the drawing area when all commands inactive

Function Description:

Users could filter by the object type and property. For example, users could select all multiple text objects with specified text style in drawings.
