

# SOLIDEDIT command

2359 GstarCAD MY /KW April 15, 2022 [CAD Commands](#) 0 2493

The **SOLIDEDIT** command is used to edit faces and edges of 3D solids.

## Command Access:

**Menu** : Modify > Solid Editing

**Command** : SOLIDEDIT

## Command Prompts:

Enter a solids editing option [Face/Edge/Body/Undo/eXit]<eXit>:

## Function Description:

Users could extrude, move, rotate, offset, incline, copy, remove faces, color, and add materials for specified face by this command. This command could also copy edges and make them colored. Users could also stamp, slice, shell, remove, and check their validity for 3D solids.

The mesh objects could not be edited by the SOLIDEDIT command. However, it will prompt users to convert the closed mesh object into 3D solid when selected.
