

WBLOCK command

The **WBLOCK** command is used to save selected object as a specified graphic file or convert a block into a specified graphic file.

Command Access:

Ribbon : Insert > Block Definition> Create Block> Write Block
Command : WBLOCK

Function Description:

Inputting '-wblock' in the command line, it will display the "Create Drawing File" dialog box, users could specify new graphic file name and path. If specifying the FILEDIA system variable to be 0, it will not display this dialog box.
