

# Overview of Linetypes

2480 GstarCAD MY /KW November 9, 2021 [Workflow](#) 0 986

A line or a curve in a drawing can consist of repeating patterns of dashes, dots and blank spaces, which is called the linetype.

Objects can have their individual [LINETYPE](#) or by layer or independent of layers assigned individually.

You can set its scale to control the size of the dashes and spaces, and you can custom your own linetypes.
