Drag Multiple Lines

2698 GstarCAD MY /KW December 2, 2021 Workflow 0 1308

You can change the row and column width by dragging the line of the table and the corresponding parts of the line will also change. For example, drag the line you selected to the right and all the lines in the right will move to the right correspondingly.

Menu : Express>Table Tools>Drag Multiple Lines

Command Entry : BGMT

Operation steps :

1. Start the command.

2. Specify the line of table for dragging.

3.Specify the place or distance to drag to (left is positive), as shown below.
